

More Chocolate Candy?

I have three pieces of chocolate. One is heart shaped, one is from Halloween and is shaped like a bat and the other is just a normal piece of chocolate. I am trying to figure out which piece of chocolate candy is greater in size. All three pieces of chocolate are about the same height and each has parallel bases (similar to a prism, but the bases are not polygons). Which of the three pieces offers me the greatest amount of chocolate? Which gives me the least? Show how you know.
