

Is this the right data plan for me?

1. What do you wonder about this data plan?
2. How much data must I have had between my plan and carry over data?
3. Based on my usage, what size data plan should I consider being on?
4. If my usage continues in this same manner, how much data will I have left over at the of the month and what percentage of my original data will I have remaining?
5. How important is it to include the 0.01 from the nine and one hundredths in your calculations?
6. How much data do you use in a month? Make an estimate and then as an optional research project try to find out your average monthly data use.
