

Boeing 787 Dreamliner draws a massive plane above the United States!

To test its new Rolls Royce engines on very long flights, a 787 Dreamliner recently traced the outline of a plane above the United States.

In this picture, the plane's flight plan is almost complete. The plane will still have to fly back to Seattle.

About how many miles did the plane fly? How long do you think it took for the plane to complete this journey from Seattle and back? What are some things that you need to think about and figure out before you can determine the time and distance of this flight?
