

Wow! Double sales event!

I need this hoodie badly. Its ordinarily \$88.00 at *J.Crew* but its on sale today!

... And on sale with two discounts! Three discounts if you include the free shipping.

1. Incredible. If I use the code, "DONTMELT" how much will the hoodie cost me? What will the total percent discount be?

2. When I used the code at checkout I got this price on the invoice. Did I get 70% off? If not, what percent did I get off and how was it calculated? Show or explain your reasoning.

3. Make up your own “double discount” sale. Include item, original price, first discount and then a second discount off of the sale price. What percent off in total is your item? Feel free to get creative and design your own simple picture/advertisement.
4. Is it possible to combine multiple discounts that are less than 100% off so that an item is 100% off and essentially free?
